

G-Promed surgical background sheet

Medical Applications For

Visual Aid: It is placed behind delicate tissues, vessels, or nerves during surgery.

High Contrast: The color is green glare to create a clean, non-glare field of view.

Safety: It is non-toxic, latex-free, and designed to not shed or leave particles behind.

G-Promed surgical background sheet is a micro-surgical background material. It is a contrast material used in microscopic surgeries to create a clean, non-glare field of view. Silicone material allows for visibility under x-ray.

Applications

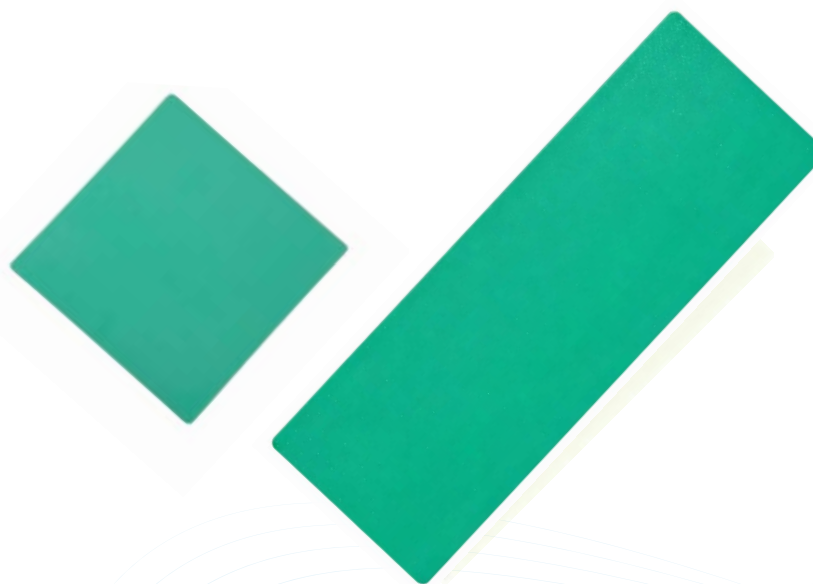

Surgeons use this material frequently in operations requiring an operating microscope.

It is designed to lie perfectly flat and stay in place during a procedure.

Surgeons can easily trim the material with surgical scissors to fit the exact size of your surgical site.

Single-Use

These materials are strictly sterile, single-use to prevent infection.

Applications

- Microsurgery
- Neurosurgery
- Urology
- Plastic Surgery
